INDEPENDENT AUDITOR'S REPORT
TO THE BOARD OF DIRECTORS OF
PRIME INSURANCE COMPANY LIMITED

Report on the Audit of the relevant elements of the Solvency and Financial Condition Report

Opinion

We have audited the following Solvency II Quantitative Reporting Templates ("QRTs") contained in Annex I to Commission Implementing Regulation (EU) No 2023/895 of 4th April 2023, of Prime Insurance Company Limited (the "Company"), prepared as at 31 December 2024:

- S.02.01.02 - Balance sheet
- S.12.01.02 - Life and Health SLT Technical Provisions
- S.17.01.02 - Non-Life Technical Provisions
- S.23.01.01 - Own funds
- S.25.01.21 - Solvency Capital Requirement - for undertakings on Standard Formula
- S.28.02.01 - Minimum Capital Requirement - Both life and non-life insurance activity

The above QRTs are collectively referred to for the remainder of this report as "the relevant QRTs of the Solvency and Financial Condition Report", as attached.

In our opinion, the information in the relevant QRTs of the Solvency and Financial Condition Report as at 31 December 2024 is prepared, in all material respects, in accordance with the Insurance and Reinsurance Services and other Related Issues Law of 2016, the Commission Delegated Regulation (EU) 2015/35, the Commission Delegated Regulation (EU) 2016/467, the relevant EU Commission's Implementing Regulations and the relevant Orders of the Superintendent of Insurance (collectively "the Framework").

INDEPENDENT AUDITOR'S REPORT
TO THE BOARD OF DIRECTORS OF
PRIME INSURANCE COMPANY LIMITED

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the relevant QRTs of the Solvency and Financial Condition Report* section of our report. We are independent of the Company in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code) together with the ethical requirements that are relevant to our audit of the relevant QRTs of the Solvency and Financial Condition Report in Cyprus, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the IESBA Code. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Emphasis of Matter

We draw attention to the 'Valuation for solvency purposes' and 'Capital Management' sections of the Solvency and Financial Condition Report, which describe the basis of preparation. The Solvency and Financial Condition Report is prepared in compliance with the Framework, and therefore in accordance with a special purpose financial reporting framework. As a result, the Solvency and Financial Condition Report may not be suitable for another purpose. Our opinion is not modified in respect of this matter.

Other information

The Board of Directors is responsible for the Other information. The Other information comprises certain narrative sections and certain QRTs of the Solvency and Financial Condition Report as listed below:

Narrative sections:

- Business and performance
- Valuation for solvency purposes
- Capital management

QRTs (contained in Annex I to Commission Implementing Regulation (EU) No 2023/895 of 4 April 2023):

- S.05.01.02 - Premiums, claims and expenses by line of business
- S.05.02.04 - Premiums, claims and expenses by country
- S.19.01.21 - Non-Life insurance claims

Our opinion on the relevant QRTs of the Solvency and Financial Condition Report does not cover the Other information listed above and we do not express any form of assurance conclusion thereon.

In connection with our audit of the Solvency and Financial Condition Report, our responsibility is to read the Other information and, in doing so, consider whether the Other information is materially inconsistent with the relevant elements of the Solvency and Financial Condition Report, or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this Other information, we are required to report that fact. We have nothing to report in this regard.

INDEPENDENT AUDITOR'S REPORT
TO THE BOARD OF DIRECTORS OF
PRIME INSURANCE COMPANY LIMITED

Responsibilities of the Board of Directors for the Solvency and Financial Condition Report

The Board of Directors is responsible for the preparation of the Solvency and Financial Condition Report in accordance with the Framework.

The Board of Directors is also responsible for such internal control as the Board of Directors determines is necessary to enable the preparation of a Solvency and Financial Condition Report that is free from material misstatement, whether due to fraud or error.

In preparing the Solvency and Financial Condition Report, the Board of Directors is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

The Board of Directors is responsible for overseeing the Company's financial reporting process.

Auditor's Responsibilities for the Audit of the relevant QRTs of the Solvency and Financial Condition Report

Our objectives are to obtain reasonable assurance about whether the relevant QRTs of the Solvency and Financial Condition Report are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but it is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the Solvency and Financial Condition Report.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the relevant QRTs of the Solvency and Financial Condition Report, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of the basis of preparation used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors.
- Conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the Solvency and Financial Condition Report or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.

INDEPENDENT AUDITOR'S REPORT
TO THE BOARD OF DIRECTORS OF
PRIME INSURANCE COMPANY LIMITED

Auditor's Responsibilities for the Audit of the relevant QRTs of the Solvency and Financial Condition Report (continued)

We communicate with the Board of Directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Other Matter

Our report is intended solely for the Board of Directors of the Company and should not be used by any other parties. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whose knowledge this report may come to.

PRIME INSURANCE COMPANY LIMITED

SOLVENCY AND FINANCIAL CONDITION REPORT

Year 2024

Executive Summary

This Solvency and Financial Condition Report has been prepared for Prime Insurance Company Limited (hereinafter “Prime” or “Company”) in accordance with all applicable laws and regulations. It refers to the financial year ended **31 December 2024**.

Business and Performance

The Company is licensed by the Cyprus Insurance Companies Control Service to underwrite the following insurance classes:

Life Business

Classes 1, 3 and 4

Non-Life Business

Classes 1, 3, 5, 6, 7, 8, 10, 11, 12, 13, 15, 16, 17, 18

The Company is registered and operates in Cyprus. It also maintains a Branch in Greece, closed to new business since April 2020, under the Freedom of Establishment Act.

The Company prepares its financial statements in accordance with International Financial Reporting Standards (IFRS) as adopted by the EU.

Prime’s continuing operations (Cyprus) remain profitable with an after-tax profit of €0.9 million for both 2024 and 2023.

Greek operations closed to new business in 2020. The losses arising from discontinuing operations were €1,9 million compared to €0,5 million losses in 2023.

Overall, the Company had after-tax loss of €1 million, compared to after-tax profits of €0.4 million in 2023. The losses are largely due one-off revisions of the liability for motor incurred claims. Life and health business profitability has significantly improved by €1.2million to €2.9million, from €1.7million last year.

Capital Management

The SCR coverage ratio as at **31.12.2024** was **140%**, improved from the 131% reported a year earlier due to significant profits on a Solvency II basis.

The company aims to improve the coverage ratio even further by increasing market share, further restoring individual lines and overall profitability.

Income arising is composed of dividends, interest, fair value gains, gains on disposal of investments, rental income received and foreign exchange gains.

1.4 Performance of other activities

No significant transactions to report.

1.5 Any other information

No significant issues to report.

2 System of Governance

2.1 General information on the system of governance

Prime is committed to implementing a sound governance framework that provides for the sound and prudent management of the business based on the following principles:

- Transparent organisational structure
- Strategic objectives and corporate values communicated throughout Prime
- Clear lines of responsibility and accountability throughout Prime
- BOD members and Senior Management are qualified for their positions, have a clear understanding of their role in corporate governance and are able to exercise sound independent judgment about the affairs of Prime and that fit and proper requirements are met
- There is appropriate oversight of Prime's activities through the three lines of defence model
- Effective utilisation of the work conducted by internal and external auditors, as well as other control functions, given their critical contribution to sound corporate governance
- Compensation policies and practices are consistent with Prime's ethical values, objectives, strategy, and control environment

2.1.1 *The structure of the Board of Directors (BoD)*

The current membership of the Board is presented below:

1. Mrs Maria Contomina, Chairwoman, Non-Executive
2. Mr Panayiotis Panayiotou, Vice Chairman, Executive CEO
3. Mrs Theoni Panagopoulou, Non-Executive
4. Mr Marios Cosma, Non-Executive
5. Mr George Intzides, Non-Executive
6. Mr Marinos Iacovides, Executive CFO

The Company is ultimately governed by the BoD which is comprised of five non-executive members (chairman and four directors) and two executive directors (the Managing Director of the Company and the CFO).

The BoD maintains responsibility for the prudent management of the Company. It reviews and assesses the Company's strategic and business planning, solvency, as well as the Senior Management's approach to addressing risks and challenges. It reviews reports submitted by Senior Management and maintains frequent and open communication with the General Manager and Executive and Risk Committees.

For a more effective organisation of Prime, the Board has established the below-mentioned Committees (as at 07/04/2024).

Committee	Brief Terms of Reference	Composition
Audit & Risk Committee	Ensures the operation of an effective system of internal controls within Prime and oversees the selection and remuneration of external auditor	Mr Marios Cosma Mrs Theoni Panagopoulou Mr George Intzides
Compliance	Monitor's compliance initiatives including regulatory as well as voluntary and ensures codification of processes of the Company. It also considers the exposure of the Company to significant risk and ensures the overall risk profile of the Company is sound and proficient	Mrs Theoni Panagopoulou Mr George Intzides Mr Marios Cosma
Investment Committee	Reviews and challenges the investment policy of Prime and its implementation in the business	Mr Panayiotis Panayiotou Mr Marios Cosma Mr Marinos Iacovides
Remuneration Committee	Monitors the formation of policies related to benefits and appointments and ensures that these policies drive for an effective internal control system	Mrs Maria Contomina Mr Panayiotis Panayiotou Mr George Intzides

2.1.2 Description of the main roles and responsibilities of key functions

Internal Audit

The Internal Audit function of the Company is administratively independent of any functions which have operational responsibilities in line with Solvency II Delegated Acts and local legislation.

Through annual audits and consultations, the Internal Audit function provides assurance and advice on the adequacy and effectiveness of the Company's Internal Control System, operational functions and any matters which would require their review.

The Internal Audit function reports to the Board through the Audit Committee.

Compliance

The Compliance Function reports to the General Manager and has a direct reporting line to the Board. It is independent of risk-taking functions e.g., underwriting and claims. The function is subject to audit by the Internal Audit function.

Actuarial Function

The Actuarial function advises the Senior Management and the BoD of the Company on the valuation of the technical provisions, the overall underwriting policy and the reinsurance arrangements and contributes to the effective implementation of the risk-management system. Additionally, it is responsible to assess the pricing adequacy.

The Actuarial function is a measure of quality assurance with a view to safeguarding that certain control tasks of the Company are based on expert technical actuarial advice.

Risk Management Function (RMF)

The RMF aims at facilitating the implementation of the Risk Management System of the Company. The mission of the RMF is the efficient and effective management of risks in accordance with the risk appetite of the Company, as stipulated in its Risk Appetite and Tolerance Statement.

In order to achieve its mission, the RMF designs and implements strategies, processes and reporting procedures necessary to identify, measure, monitor and report the risks on an individual and on an aggregate level. This function is also responsible for the preparation of the Own Risk and Solvency Assessment (ORSA) report which is submitted to the Board for approval and submission to the Regulator at least once a year.

2.1.3 Material changes in the system of governance over the reporting period

No material changes

2.1.4 Remuneration policy and practices for the BoD and employees

The Company has in place a remuneration policy which ensures that any remuneration is in line with the market norms in order to enable the Company to attract competent and experienced resources and ensure that any resources that it engages do not take excessive risks that could be detrimental to the Company. With regard to the awarding of any performance bonuses, at the end of each financial year the Managing Director together with the executive management propose what global amount of the Company's profits is to be distributed by way of performance bonus to the employees. The proposed amount is forwarded to the Remuneration Committee and the Board of Directors for final approval, and once this is approved the total amount is distributed to employees depending on their individual performance in the preceding year.

With regards to any commission-based remuneration, the Company ensures that all commission rates are in line with market rates and that these rates do not expose the Company to any potential risks, primarily mis-selling and policy churning.

The remuneration policy is reviewed and maintained by the Remuneration Committee and is approved by the BoD. The BoD are responsible for the implementation of the remuneration policy in Prime and specifically its application to BoD.

2.1.5 Information about material transactions during the reporting period

No significant transactions to report

2.2 Fit and proper requirements

The following are applicable to the persons who effectively run the undertaking or have other key functions:

2.2.1 *Description of the specific requirements concerning skills, knowledge and expertise*

The Company ensures that all persons who effectively run the Company or have other key functions are fit to provide sound and prudent management through their professional qualifications, knowledge and experience and are proper by being of good repute and integrity.

Moreover, the BoD collectively possesses professional qualifications, experience and knowledge about at least:

- Insurance and financial markets
- Business strategy and business model
- System of governance
- Financial and actuarial analysis
- Regulatory framework and requirements.

2.2.2 *Description of the undertaking's process for assessing the fitness and the propriety*

In order to ensure that Senior Managers / Company Directors are fit, they are recruited giving due regard to interview requirements, referencing, relevant skills, personal and professional background and other checks as required and relevant to the role to be undertaken. Some of the general checks conducted include:

- Educational Background Check
- Professional Qualifications / Membership Check.

In order to ensure that Senior Managers / Company Directors are proper, they are subject to a variety of checks at the commencement of their assessment, including:

- Credit checks
- Identity checks
- Employment History
- Criminal History checks.

Members are also approved by the regulator.

2.3 Risk management system including the own risk and solvency assessment

2.3.1 Description of the undertaking's risk management system

Prime has implemented an effective risk management system which is designed to ensure timely identification and assessment of existing and emerging risk exposures as well their effective management. The risk management system is comprehensively addressed in the Company's risk management policy which provides for the **risk governance**, a **risk appetite** statement, and the **risk management framework**.

The risk management policy suite comprises of individual risk policies for all main categories of risk namely: Underwriting Risk, Investment and Asset Liability Risk, Credit Risk, Liquidity Risk, Concentration Risk, Operational Risk and Reinsurance. It is approved by the BoD and is reviewed at least once a year.

2.3.1.1 Risk Appetite Statement

Prime's vision is to create relations of mutual trust with its customers and associates and to offer products that undoubtedly provide quality of life and security. The risk appetite statement lays down the level and nature of risks that are considered acceptable for the Company and the constraints within which it should operate in pursuing its vision.

Prime manages its risk appetite through a set of limits. The limits are set, not such that they are likely to be fully used, but rather so that limited exceptions are reported. The aggregate risk limits and the risk category limits are to be used by the RMF for the monitoring and reporting of overall risk exposure and by the BoD and Risk Committee for making decisions on the Company's risk profile.

Overall Prime sees itself as a low-risk entity and risk tolerance limits have been set to reflect that.

The Company has a target of maintaining a solvency coverage ratio at all times in excess of **115%**.

2.3.1.2 Risk Governance

The risk governance of the Company forms an integral part by defining the role of each function of the Company in the Risk Management Framework. It is organised in a way that ensures the establishment of clear responsibility boundaries, the proper segregation of duties and the avoidance of conflicts of interest at all levels.

As mentioned in previous sub-sections, the system of governance is based on the "three lines of defence model" safeguarding that risk management is embedded into the organisational structure and decision-making processes of the Company and that the risk management system is supported by appropriate internal controls and by information systems that provide relevant, accurate and reliable information. The roles of the key functions in the Risk Management System are outlined below:

Body / Function	Roles in the risk management framework
BoD	The responsibility for the approval and periodic review of the risk profile and risk appetite, as well as the risk strategy and the policies for managing risks, lies with the BoD, so as to ensure that the BoD takes all measures necessary for the monitoring and control of risks, in accordance with the approved risk strategy and policies. This information reaches the BoD through the Risk Committee
Risk Committee	Responsibility for the supervision of the risk management framework is assumed by the Risk Committee

Body / Function	Roles in the risk management framework
	• The Risk Committee reviews on an annual basis the suite of Risk Policies of the Company and pre-approves any required changes, and subsequently forwards the updated Policy to the BoD for final approval • The Risk Committee receives frequent information on the levels of risks to which the Company is exposed, with the purpose of ensuring that the Company's risk profile remains within the established risk tolerance limits. Risk appetite and risk limits are set at a level which is commensurate with the sound operation of the Company and its strategic goals
Risk Management Function (RMF)	• Supports the BoD in the determination and implementation of the risk strategy and capital planning • Coordinates the implementation of the risk management framework and is the main unit for risk management responsibilities • Regular reporting to the Senior Management and Risk Committee • Risk management training to the BoD, Committees, Senior Management and Risk-taking functions directly involved in the management and oversight of risk, on the contents of the current and other risk-specific policies, and for providing guidance on their application • Moreover, the RMF continuously reviews the compliance of the Risk Management Policy with Solvency II requirements and the appropriateness of risk strategy with Company objectives, appetite, and limits, and informs the Risk Committee of any changes that may be required • Monitors the risk profile of the Company against the BoD's risk appetite • Develops internal risk methodologies and models • The RMF also brings to the attention of the Risk Committee any breaches of the Risk Management Policy • The full responsibilities of the RMF are documented in the RMF Policy
Managing Director and Senior Management with risk taking capacity	• The Company's Senior Management is responsible for the implementation of the risk strategy, as this has been approved by the BoD, and for the development of the policies, methodologies and procedures required to identify, measure, monitor and control every type of risk, in accordance with the nature and complexity of the Company's operations • They also have the responsibility to apply the framework in their day-to-day activities
Business Units	• The individual business units under the direction of their Heads have the responsibility to know and apply the requirements of the risk strategy and policies in their area of business
Actuarial Function	• The Actuarial function is a specialised function that advises the Senior Management of the Company on the calculation of technical provisions, capital requirements, product pricing, as well as on the technical aspects of risk management and modelling. The actuarial department provides further input on items such as -business planning -overall risk management -investment management -reinsurance optimization

Body / Function	Roles in the risk management framework
Compliance Function	The Compliance Function applies suitable procedures for the purpose of achieving a timely and on-going compliance of the Company's risk management framework with existing and new laws and regulations
Internal Audit	The Internal Audit Function undertakes independent reviews and testing of the risk management framework or of specific components of the framework and reports the results to the Audit Committee. The responsibilities of Internal Audit are governed by the Internal Audit Policy

2.3.1.3 Risk management Processes

The Company's Risk Management System encompasses a number of key processes and procedures which address the Company's key risks. These steps are summarised below:

- a. **Risk identification** - Risks are identified and documented in the Risk Register. Risk and control owners are assigned to each risk to ensure accountability for managing all material risks and the related controls.
- b. **Risk assessment** - The risk exposures are then assessed qualitatively on a gross basis (inherent risk) and on a net basis (residual risk) on established criteria for frequency and severity for risk not covered by capital and using the Value at Risk (VaR) measure for risks covered by capital. Stress testing is conducted regularly by the RMF as a risk assessment tool in order to assess the Company's vulnerability to possible events or future changes in economic conditions which have unfavourable effects on its performance, solvency, liquidity or reputation and its ability to withstand such changes.
- c. **Risk control and mitigation** - The Company designs and implements controls to prevent or detect the occurrence of an identified risk event or to mitigate its severity. The Company's control activities are documented in the Risk Register.
- d. **Risk monitoring** - The RMF has the responsibility to ensure that all material risk exposures are monitored on an on-going basis and that any risks that fall outside the approved risk appetite of the Company are identified and appropriately escalated to the Risk Committee. At least once a year, the Risk Register is formally reviewed by the RMF and any actions deemed necessary following such review are brought to the attention of the Board.

2.3.1.4 Risk Reporting

The Risk Management function reports to the BoD, through the Risk Committee at least annually on its assessment of material risks and the management thereof, in particular the actions being taken to mitigate or control key risk exposures. It is also obliged to report the following to the BoD, without delay:

- Any significant changes to the overall risk profile of the Company
- Any deviations from the risk management strategy or risk appetite
- Any risk management matters in relation to strategic affairs, such as major projects and investments.

2.3.2 Description of how the risk management system (including the risk management function) are implemented and integrated into the organisational structure and decision-making processes of the undertaking

In implementing its risk management strategy, the Company operates the 'Three Line of Defence Model' to manage its risk and control its activities. This ensures the establishment of clear responsibility boundaries, the proper segregation of duties and the avoidance of conflicts of interest at all levels, including the BoD, Senior Management, RMF and Business Units.

The **First Line of Defence** relates to the management of risks at the points where they arise. These activities are carried out by persons who take on risks on behalf of the Company. Risk management at this level consists of appropriate checks and controls, incorporated in the relevant procedures and the guidelines that are set by the Risk Committee with the assistance of the RMF.

The **Second Line of Defence** concerns the risk management activities that are carried out by the RMF and the important supporting operations. It also refers to the risk management activities performed by the Risk Committee and includes the approval and oversight of the implementation of risk policies and the establishment of systems and controls so that the overall level of risks and the relationship between risk and rewards remains within acceptable levels.

The **Third line of Defence** concerns the activities of the Internal Audit Function that through its work provides an independent assurance to the BoD, on the performance and effectiveness of the risk management systems within the Company.

The Company embeds the risk management system into the organisational structure and supports it by appropriate internal controls and by information systems that provide relevant, accurate and reliable information. The risk management system then provides information that are fed into the decision-making processes by assessing the risk exposure of alternative strategies the Company is considering with respect to risk mitigation, business volumes and investments.

2.3.3 Process adopted to fulfil the obligation to conduct an ORSA

2.3.3.1 Description of the process undertaken by the undertaking to fulfil its obligation to conduct an ORSA as part of its risk management system

In line with the Company's ORSA policy, ORSA can be defined as the entirety of the processes and procedures employed to identify, assess, monitor, manage and report the short and long term risks the Company faces or may face and to determine the own funds necessary to ensure that the Company's overall solvency needs are met at all times.

The Company follows the steps below to implement its ORSA:

- a. **Identify and classify risks** - The Company identifies the material risks it faces at a particular point in time. This includes risks considered in the SCR standard formula, as well as risks not included in the standard formula such as liquidity, strategic and business risks.
- b. **Assessment and measurement of risks through different approaches including stress testing** - the Company collects data, quantifies, and aggregates risks using different approaches such as Value at Risk and stress testing. The assessment is done using predefined risk metrics.
- c. **Capital Allocation** – According to its risk profile, the Company determines the necessary additional capital over and above the regulatory minimum SCR.
- d. **Capital planning** – Based on the capital allocation projections, the Company prepares a capital plan for the following 3 years. Such plans depend on the Company's strategic objectives and financial projections and assumptions on future economic conditions.
- e. **Stress testing** - The Company applies stress and scenario testing to the forward-looking capital plan and develops actions that can be taken in unforeseen circumstances in the future.
- f. **Communicate and document the results** – The Company presents the results of the process to senior management and the Board of Directors and prepares the ORSA report.

2.3.3.2 How the ORSA is integrated into the organisational structure and decision-making processes of the undertaking

ORSA covers all the operations of the organisation and all business units of the Company.

The ORSA considers the Company as whole, Cyprus and Greece. The BoD is the body that bears the ultimate responsibility for the ORSA, its application and embedment within the Company's Day to Day procedures.

The roles and responsibilities for the ORSA for each body and function of the Company (BoD, Senior Management, RMF, Actuarial function, Compliance function, Finance function, Internal Audit function, Risk taking departments) are defined in the ORSA policy of the Company.

The ORSA process is not independent from the “business as usual” process of the Company. As a result, the RMF reports the Company’s risks and stress tests and the BoD and Management make decisions upon the results of these procedures. In addition, the Company considers the impact on its capital in its financial projections. Strategic decisions are assessed and evaluated in the light of their effect on the Company’s risk situation and risk-bearing capacity over the business planning horizon. Such strategic decisions include but are not limited to:

- Target business volumes
- Reinsurance arrangements
- Investment decisions
- Introduction of new products
- Utilisation of additional distribution channels or direct sales.

2.3.3.3 ***A statement detailing how often the ORSA is reviewed and approved by the BoD***

The Company currently intends to perform the ORSA annually. Furthermore, the assessment will be performed immediately following any significant changes to the environment that the Company operates.

These changes include, but are not limited to:

- Significant changes to the financial and political environment in which the Company operates
- Significant operational losses
- Material changes to the new business volumes
- Planned changes to the operating model of the Company
- Significant changes in the Company’s risk profile.

2.3.3.4 *A statement explaining how the undertaking has determined its own solvency needs given its risk profile and how its capital management activities and its risk management system interact with each other*

Solvency needs are determined by the EIOPAs standard formula. Hence the standard formula is the key capital optimisation tool used by the company. Each individual risk module sensitivities are investigated, and the company makes informed decisions as to whether a risk should be taken, maintained, increased or decreased considering the respective risk / return considerations. For example, the investment portfolio is assessed against the market risk components such as equity, spread and concentration risk formulae and individual investments are readjusted accordingly.

Coverage was increased from 131% in 2023 to 140% in 2024 through several measures, including:

- Investment de-risking (e.g., investing in higher rated bank institutions)
- Continued run-off of loss-making operations in Greece (reduced impact on own funds, coupled with reduced capital requirements)

The Company is committed to executing further improvements to improve the SCR coverage ratio in the upcoming years through measures targeted at increasing profitability whilst keeping capital requirements to a minimum.

2.4 Internal control system

2.4.1 *Description of the undertaking's internal control system*

Internal control is a process effected by Prime's Board of Directors, management, and other personnel and is designed to provide reasonable assurance regarding the achievement of objectives in the following categories:

- Effectiveness and efficiency of operations
- Reliability of financial reporting
- Compliance with applicable laws and regulations.

Every member of Prime has a role in the system of internal control. Internal control is people-dependent, and its strength depends on people's attitude toward internal control and their attention to it:

- The Board is responsible for setting the strategy, tone, culture, and values of the Company
- Management, Risk Management, Compliance and Actuarial functions design policies and procedures to ensure that an effective internal control system is established within the Company
- The Internal Audit function monitors the effectiveness of the internal control system

There are five interrelated components of effective internal control, which are discussed in the following sections:

- Control Environment
- Risk Management
- Control Activities
- Reporting
- Monitoring.

Each of these are outlined below:

2.4.1.1 Control environment

The control environment sets the tone of the Company, influencing the control consciousness of its people. It is the foundation for all other components of the Company's internal control system, providing discipline and structure. Control environment factors include:

- Integrity and ethical values
- Commitment to competence
- Management's philosophy and operating style
- Organisational structure
- Assignment of authority and responsibility
- HR policies and practices.

2.4.1.2 Risk Management

The risk management system entails the identification and analysis of relevant risks which threaten the achievement of the Company's objectives, forming a basis for determining how the risks should be managed. As an integral part of its Risk Management system, the Company identifies all reasonably foreseeable material risks and assesses the frequency and severity of such risks, recording such identification and assessment in the Risk Register.

The process is overseen by the Board and Risk Management function. The risk management process is described in detailed in the Company's Risk Management Policy.

2.4.1.3 Control Activities

Control activities are the policies and procedures that are designed to ensure that management directives are carried out, strategies are properly implemented, and the necessary actions are taken to address material risks to the achievement of the Company's objectives. Control activities occur throughout the entire Company, at all levels and in all functions. They include a range of activities as diverse as:

- approval and authorization requirements, as required by the Company's procedure manual;
- segregation of duties, as reflected in the Company's organisational structure and in other controls outlined in the procedure manual;
- controls required by the Company's various policies, such as the Outsourcing Policy;
- verifications, reconciliations, reviews, controls over assets and other controls as identified in the procedure manual and which are primarily aimed at implementing the four-eyes principle.

The Company has appropriate documented policies, procedures, techniques, and mechanisms in place for each of its business areas (e.g., Underwriting, Claims) and control functions (Risk and Compliance). All relevant objectives and associated risks for each significant activity are identified in conjunction with conducting the risk identification process.

Up to date Company policies and procedures are distributed to all relevant personnel, who read and understand them. Management oversees the implementation of the Company's policies and procedures and ensures that control activities are properly applied. Monitoring personnel review the functioning of established control activities and remain alert for instances in which excessive control activities should be streamlined. They act timely on exceptions, implementation problems, or information that requires follow-up.

Control activities are regularly evaluated to ensure that they are still appropriate and working as intended.

2.4.1.4 Reporting

Financial and other information must be identified, captured, and communicated in a form and timeframe that enables the management and the BoD to carry out their responsibilities. Management accounts, solvency assessments and risk reports are submitted to the BoD on a quarterly basis. Moreover, all key functions report to the Board at least once a year on their activities, the adherence to their respective Company policies together with any proposals for changes to the policy as considered necessary by the relevant function.

2.4.1.5 Monitoring of internal controls

The Company has established the necessary monitoring mechanisms that facilitate the understanding of the Company's situation and provide the Board with relevant information for the decision-making process. Management and monitoring personnel know their responsibilities for internal control and make control and control monitoring part of their regular operating processes.

Regular monitoring occurs during normal operations and includes on-going Management activities and actions taken by all personnel when performing their duties. It is performed continually and on a real-time basis, reacts dynamically to changing conditions and is ingrained in the Company's operations.

The effectiveness of the internal control system is monitored on a continuous basis by business areas and control owners, any deficiencies of the system are identified and rectified in a timely manner. As part of the internal control monitoring, the quality of performance over time is assessed and the findings of audits and other reviews are promptly resolved.

2.4.2 Description of how the Compliance function is implemented

The Compliance function ensures that compliance awareness is promoted internally and externally, and that compliance is an integral part of the corporate culture of Prime. Employees within the organisation receive adequate training on compliance and Anti-Money Laundering issues on a set periodic basis and are encouraged to identify and report all breaches as necessary so that corrective action can be immediately taken, and risks mitigated.

The role of the Compliance function includes:

- a advising the Board of Directors on compliance with any legislation, regulations, and any other applicable laws, in so far as they apply to the Company,
- b the assessment of possible impact as regards changes in the legal environment on the Company,
- c the identification and assessment of any compliance/regulatory risks,
- d providing the Board of Directors with regular reports on the progress of the compliance plan, and any other matters which need to be brought to the attention of the Board of Directors.

Prime has a compliance plan and a compliance policy in place. The compliance policy delineates the responsibilities of the Board of Directors together with the delegated responsibilities of the resources within the Compliance department and more specifically the responsibilities of the Compliance function. The compliance policy is reviewed every year by the Board of Directors, and if required, it is updated to ensure that it remains relevant to the Company and in line with the regulation. On the other hand, the annual compliance plan is drawn up every year by the Compliance function and is approved by the Board of Directors.

2.5 Internal audit function

The Company's Internal Audit Policy establishes and maintains an Internal Audit function, the objectives of which are:

- a. to independently examine and evaluate the functioning and effectiveness of the internal controls and all other elements of the system of governance.
- b. to assess compliance with internal strategies, policies, processes, and reporting procedures.

The Internal Audit function reports to the Board through the Audit Committee. The Internal Audit function has an unrestricted right to obtain information relevant to the discharge of its responsibilities. This entails the prompt provision of all necessary information, the availability of all essential documentation and the ability to look into all activities and processes of the Company. To this effect, the Internal Audit function has full, free, and unrestricted access to all the personnel of the Company who shall, in turn, ensure that the Internal Audit function obtains the necessary information about, and has the necessary access to the Company's outsourced functions.

2.6 Actuarial function

The Actuarial function is a critical function for Prime. It is subject to the fit and proper criteria and according to the relevant legislation it should always be carried out by persons who are fit and proper to carry out the duties outlined below, in an objective manner and free from any undue influences. The Actuarial function is executed by a Fellow of the Institute of Actuaries who fulfils all above criteria.

The Actuarial function reports to the Chief Executive Officer and to the BoD and is subject to the audit of the Internal Audit function regarding the adequacy and effectiveness of its procedures.

The role of the Actuarial function is to establish and maintain appropriate procedures, processes, and systems sufficient to allow the Company to reasonably estimate its insurance obligations and exposures and the related capital requirements, in line with applicable laws and recognised professional standards. In this context, the Actuarial function coordinates the assessment and validation of internal data to determine the level of compliance with recognised standards for data quality and, if necessary, recommends improvements.

Furthermore, the Actuarial function is involved in the profit testing process of new products assessing them for profitability, capital intensiveness, risk profile, system compatibility and marketability. It also contributes to financial modelling in relation to risk management activities and the ORSA in particular.

The activities of the Actuarial function during 2024 were as follows:

- Carried out the calculation of technical provisions on a quarterly basis in accordance with all relevant regulatory requirements,
- Submitted reports in relation to the above calculations to the BoD,
- Expressed opinion on adequacy of Reinsurance Arrangements and participated in the discussions with the Reinsurers for the renewal of treaties,
- Expressed opinion on the Company's underwriting policy,
- Worked closely with the management and addressed areas of its expertise in relation to the Company's ongoing operations,
- Carried out investigations to the Company's experience in terms of claims, lapses, expenses, and new business volumes.

2.7 Outsourcing

The criteria for the selection of service providers and the process for their appointment is laid down in the Company's outsourcing policy which is approved by the BoD and reviewed once a year. In particular, the outsourcing policy states that when choosing a service provider for any critical or important functions or activities Prime ensures that:

- The potential service provider has the ability and capacity and any authorisation required by law to deliver the required functions or activities satisfactorily, considering the undertaking's objectives and needs
- The service provider has adopted all means to ensure that no explicit or potential conflict of interests with Prime impairs the needs of the outsourcing undertaking
- It enters into a written agreement with the service provider which clearly allocates the respective rights and obligations of the undertaking and the service provider
- The general terms and conditions of the outsourcing agreement are authorised and understood by the Managing Director. The outsourcing does not represent a breach of any data protection regulation or any other laws
- The service provider is subject to provisions on the safety and confidentiality of information relating to Prime or to its policyholders or beneficiaries

In order to ensure against an undue increase in Operational Risk, when outsourcing critical or important functions or activities the Company shall:

- Verify that the service provider has adequate financial resources to take on the tasks Prime plans to transfer and to discharge its duties properly and reliably towards Prime and that the staff of the service provider is chosen based on criteria that give reasonable assurance that they are sufficiently qualified and reliable,
- Make sure the service provider has adequate contingency plans in place to deal with emergency situations or business disruptions and has periodic testing of backup facilities where that is necessary having regard to the function, service or activity outsourced.

Furthermore, the Policy lays down the minimum required contents of an outsourcing agreement safeguarding the quality of service provided, protecting the interests of Prime, ensuring that conflicts of interest are avoided and that the service provider cooperates with internal or external auditors as well as the Cyprus Superintendent of Insurance.

Tania Kyprianidou (Deloitte Actuarial Services Limited) acts as the Risk Management Function Holder of the Company.

MNK Risk Consulting are the Compliance function holders for Prime Insurance.

2.8 Adequacy of the system of governance

The system of governance has been designed to ensure that the management is able to provide the appropriate levels of oversight whilst allowing decisions to be made more quickly and ensuring that the Company's employees are empowered to make decisions at the right levels of the Company.

The Company continues to align its management and governance structure to proactively respond to the business and regulatory needs.

The BoD has the overall responsibility for setting the Company's strategy and to safeguard that the strategy does not expose the Company to any unwanted levels of risk as defines in its risk appetite statement.

The Committees at BoD level have clearly defined terms of reference, are empowered to make decisions within their limits of authority thereby allowing the Company to adapt to changes in an agile and flexible manner.

Once the strategy and the business plan are agreed the executive management is delegated with the responsibility to implement it and to operate within these constraints. The organisation of Prime is such that enables the implementation of the BoD strategy in an effective manner whilst adequate oversight is taking place through the second line of defence functions.

The risk management system is integrated into the strategy and the business planning process and is generally embedded in the decision-making processes of the Company. This ensures that the strategy results in an acceptable risk profile. It also facilitates awareness of the risk exposures of the Company and provides early warning signals for the management to take corrective action and ensure sufficient and smooth emergence of profits.

Nonetheless, the Company aims to continuously improve its governance system by ensuring that it is regularly reviewed, evaluated, and enhanced.

3 Risk Profile

Prime measures quantifiable risks through the 99.5% Value at risk using the Solvency II standard formula (SCR). The Company aims to always hold sufficient capital to protect itself from losses occurring due to such risks. In addition to capital, the Company manages all risks through its processes and procedures and its internal control framework and by monitoring exposures and benchmarking against its risk appetite.

The components of the SCR (before diversification) for the reporting period ended 31 December 2024, are presented in the following graph:

The Company's risk profile is mainly driven by its insurance operations. Underwriting risk forms around 75% of the total risk portfolio of Prime. The rest of the risk exposure arises from credit risk (in relation to premium receivables from brokers, reinsurance recoverables and cash at bank) and market risk (in relation to the investments of the Company). Finally, the exposure to operational risk is also assessed through qualitative analyses mentioned in subsequent sections.

3.1 Underwriting Risk

3.1.1 Description of the risk

Prime currently ranks its overall residual exposure to underwriting risk as a medium risk exposure.

The underwriting risk of Prime has three main categories which are listed below in order of magnitude:

- Non-life underwriting risk
- Life underwriting risk
- Health underwriting risk

Due to closure to new business in Greece, non-life underwriting risk has fallen significantly.

The components of the underwriting risk of Prime by risk category are shown in the table below.

Non-Life Underwriting risk	
Premium and Reserve risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from fluctuations in the timing, frequency, and severity of insured events, and in the timing and amount of claim settlements</i>
Catastrophe risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from significant uncertainty of pricing and provisioning assumptions related to extreme or exceptional events</i>
Lapse Risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level or volatility of the rates of policy lapses, terminations, renewals, and surrenders</i>
Life underwriting risk	
Lapse risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level or volatility of the rates of policy lapses, terminations, renewals, and surrenders</i>
Life expense risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of the expenses incurred in servicing insurance or reinsurance contracts</i>
Mortality risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of mortality rates, where an increase in the mortality rate leads to an increase in the value of insurance liabilities</i>
Life catastrophe	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from the significant uncertainty of pricing and provisioning assumptions related to extreme or irregular events</i>
Disability-morbidity risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level, trend or volatility of disability, sickness, and morbidity rates</i>

Health underwriting risk	
Premium and Reserve risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from fluctuations in the timing, frequency, and severity of insured events, and in the timing and amount of claim settlements</i>
catastrophe risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from significant uncertainty of pricing and provisioning assumptions related to extreme or exceptional events</i>
Lapse Risk	<i>the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level or volatility of the rates of policy lapses, terminations, renewals, and surrenders</i>

3.1.2 Description of the measures used to assess the risk

The main risk assessment tools used by the Company are the standard formula solvency capital requirement calculation, stress and scenario testing, the risk register, and other quantitative and qualitative assessments. There has been no material change in the tools, parameters or assumptions used since the previous year.

3.1.3 Risk Concentration

No material underwriting risk concentrations have been identified. This is because of:

- The Company writes both life and non-life insurance business. This enables Prime to diversify between different sources of insurance risk.
- The life insurance portfolio enjoys high levels of diversification with respect to age, gender, smoker status, socio- economic class, level of life insurance cover, type of insurance cover and degree of underwriting applied at inception of the cover.
- With respect to the non-life insurance portfolio, the Company underwrites mainly annual policies, and therefore has the ability to rate risks individually and to impose conditions in accordance with the risk under consideration. The underwriting strategy is to diversify the type of insurance risk accepted and within each line of business to obtain a sufficiently large population of risk to reduce the variability of the expected outcome.
- Reinsurance: The Company manages its exposure to any one risk and to catastrophic events using reinsurance. Thus, the loss to the Company is generally limited to its retention.

3.1.4 Risk Mitigation

The main risk mitigation technique that Prime Insurance employs is reinsurance. Reinsurance protection is in place substantially for the lines of business deemed necessary.

Risks arising from underwriting activities are managed through Prime's underwriting strategy, internal risk limits and underwriting guidelines that are in place to enforce appropriate risk selection criteria and are also reinforced by internal controls.

Product approval process, premium rate reviews and internal underwriting authority and limits are also in place to further mitigate Underwriting Risk exposures.

Prime does not allow, under any circumstances, the underwriting of high risk or complex products, of which risks cannot be fully understood, measured and/or managed.

Finally, to further mitigate Underwriting Risk, the Company also undertakes an actuarial evaluation of Technical Provisions and the adequacy of premium pricing rates.

3.1.5 Risk Sensitivity

As part of the business and capital planning processes, the risk management function carries out stress tests to feed into the ORSA. This ensures that potential adverse scenarios are considered, and negative outcomes can be adequately mitigated either through controls implemented, through timely remedial actions or through the commitment of additional capital.

3.2 Market risk

3.2.1 Description of the risk

The Company is exposed to market (Investment) risk through its asset portfolio and in particular from the level or volatility of market prices of financial instruments which have an impact upon the value of the assets and liabilities of the Company.

As at 31 December 2024, Prime's investment assets include property, equity, bonds, mutual funds, cash and deposits. Investments are subject to credit risk (including counterparty default risk, spread risk and concentration risk) and liquidity risk which are dealt with in the respective sections below. Market risk arises in the following forms both on the asset and on the liability side as the value of technical provisions depends on market conditions:

- Interest rate risk: *the sensitivity of the values of assets, liabilities, and financial instruments to changes in the term structure of interest rates, or in the volatility of interest rates*
- Equity risk: *the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or in the volatility of market prices of equities*
- Property risk: *the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or in the volatility of market prices of real estate*
- Currency risk: *the sensitivity of the values of assets, liabilities, and financial instruments to changes in the level or in the volatility of currency exchange rates*

The primary sources of market risk are equity and property risks arising from exposure to the respective asset classes. Significant concentration risk arises from high exposure in single investments. Currency risk is zero due to nil non-euro denominated investments.

3.2.2 Description of the measures used to assess the risk

Prime measures its market risk using the standard formula for the calculation of SCR. The measurement is done separately for the sub-categories mentioned above. Then the aggregate market risk measure allows for diversification between its components.

3.2.3 Risk Concentration

A significant portion of Prime's assets are held through collective investment vehicles. These enable higher levels of diversification which may not have been possible with direct holdings.

The investment portfolio of Prime is well diversified with no single name exposure holding more than 5% of the total assets.

3.2.4 Risk Mitigation

Market risk is mitigated through the investment policy adopted by Prime which safeguards limited exposure to risky asset classes and minimum diversification limits.

The Investment Committee reviews investment related information regularly to ensure that the portfolio is invested in line with the investment guidelines and the risk appetite of the Company.

3.2.5 Risk Sensitivity

As part of the business and capital planning processes, the risk management function carries out stress tests to feed into the ORSA. This ensures that potential adverse scenarios are considered, and negative outcomes can be adequately mitigated either through controls implemented, timely remedial actions or through the commitment of additional capital.

3.2.6 Prudent Person Principle

The Solvency II regulation requires investment of assets in accordance with the "Prudent Person Principle". Considering this, the Company aims to align its investment policy with this principle.

The Company regularly reviews the financial condition of its investment counterparties and endeavours that the currency, nature, and duration of assets is appropriate to the characteristics of its liabilities, avoiding excessive reliance on any one counterparty or asset class or geographical location. The Company has not invested in derivatives or inadmissible financial instruments.

3.3 Credit risk

3.3.1 Description of the risk

Credit risk refers to the risk of loss or of adverse change in the financial situation, resulting from fluctuations in the credit standing of counterparties. Prime is exposed to credit risk arising from the following exposures:

- Cash at bank
- Bonds and deposits
- Reinsurance recoverables
- Premium receivables

The overall credit risk exposure is considered to be fair at 2.9mln. The main driver of credit risk concentration risk with just a few large holdings affecting the overall concentration risk capital requirement.

3.3.2 Description of the measures used to assess the risk

Prime measures its credit risk using the standard formula for the calculation of SCR. The measurement is done separately for the sub-categories mentioned above.

3.3.3 Risk Concentration

Concentration is minimal and mainly arises from single name exposures which are unrated and hence there is greater uncertainty as to their creditworthiness.

3.3.4 Risk Mitigation

Credit risk is mitigated by closely monitoring the credit rating and the financial condition of all key counterparties. These are reviewed at least quarterly, and management is ready to take action in the event of a deterioration in the credit quality.

Furthermore, the Company has implemented a process for the timely collection of premiums as they fall due thus mitigating the risk of accumulating overdue balances. In addition, the Company has intensified efforts to collect overdue balances and has secured collaterals in several cases which help minimise the risk of default of debtors.

3.3.5 Risk Sensitivity

The Company has not performed any risk sensitivity tests for credit risk

3.4 Liquidity risk

3.4.1 Description of the risk

Liquidity risk refers to the risk that Prime will be unable to realise investments and other assets in order to settle their financial obligations when they fall due. Given that a significant proportion of the company's Net Asset Value is notionally backed by debtors, property and other less liquid assets, liquidity risk can be significant. Hence the company aims to liquidate a significant part of its own funds' investment portfolio.

3.4.2 Description of the measures used to assess the risk

Prime's liquidity requirements are assessed monthly in order to meet the Company's stated liquidity objectives. A projection is performed each month from the accounts department to assess whether all obligations due will be met by the expected cash inflows mainly from premiums due. In addition, a notional allocation of assets is mapped per the main obligations, i.e., reserves, other liabilities (such as tax) and own funds.

3.4.3 Risk Concentration

Sources of cash inflows and cash out flows (premium receivables, claims, expenses etc.) are diversified and to a certain extent independent.

3.4.4 Risk Mitigation

The Company maintains a pool of liquid assets which exceed its short-term liquidity demands. Moreover, Prime has in place a contingency liquidity plan to manage and co-ordinate the actions required to mitigate the effects of a liquidity problem across Prime.

3.4.5 Expected profit in future premiums

With respect to non-life insurance, no allowance is made in the best estimate liabilities for expected profit in future premiums as these are outside contract boundaries.

Regarding the life portfolio, the total amount of the expected profit included in future premiums as calculated in accordance with Article 260(2) is 13.9mln. The methodology used in the derivation of this figure is in line with the relevant guidance issued by EIOPA.

3.5 Operational risk

3.5.1 Description of the risk

Operational risk refers to the risk of loss arising from inadequate or failed internal processes, people, systems, or from external events. This risk encompasses all exposures faced by the Company's functions in the course of conducting the Company's business, including but not limited to, accounting and financial reporting, business continuity, claims management, information technology and data processing, legal and regulatory compliance, outsourcing and reinsurance. The Company has the exposure to the following types of operational risk:

Business Disruption & Systems Failure	Interruption of business activity due to system or communication failures
Financial Integrity & Reporting	Disclosure of materially incorrect or untimely information
External Fraud	Acts intended to defraud, misappropriate property, or circumvent the law by an external party
Internal Fraud	Acts intended to defraud, misappropriate property, or circumvent the law by an internal party
Process Risks	Failure to execute or process transactions timely and accurately with clients and other counterparties
Clients, Products and Business Practices	Lack of productivity and poor customer service

The overall exposure to operational risk is classified as low.

3.5.2 Description of the measures used to assess the risk

The main risk assessment tools used by the Company are the standard formula solvency capital requirement calculations and qualitative assessments. Qualitative assessments are undertaken to track the developments within the risk profile and review the design and operational effectiveness of the control environment across the key processes.

There have been no material changes in the tools, parameters or assumptions used since the previous year.

3.5.3 Risk Concentration

Currently there are no material operational risk concentrations.

3.5.4 Risk Mitigation

The Company addresses its operational risk through:

- The Company's business continuity plan which ensures continuity and regularity in the performance of activities
- The regular Internal Audit
- Its internal control system
- The peer review of material work

- The enforcement of appropriate underwriting, claims and other authority limits
- Insurance against property damage that could cause business disruption

3.5.5 Risk Sensitivity

Due to the complexity of the operational risk, no explicit sensitivities have been performed for the particular risk.

4 Valuation for solvency purposes

All assets and liabilities listed in the table below are valued in accordance with the Solvency II Principle and are compared to their IFRS valuation. Assets and liabilities are valued on the assumption that the Company will pursue the business as a going concern. No changes in the valuation's methods occurred during the year under review.

The Company does not have any off-balance sheet assets or liabilities.

4.1 Assets

4.1.1 Value of assets

(000€)

Assets	Solvency II 2024	IFRS Valuation 2024
Deferred acquisition costs	0	0
Other intangible assets	0	29
Deferred tax assets	0	0
Property, plant & equipment held for own use	3,519	3,519
Investments (other than assets held for unit-linked funds)	28,512	28,512
Assets held for unit-linked funds	79,421	79,421
Reinsurance recoverables	2,297	1,530
Insurance & intermediaries receivables	1,175	1,175
Receivables (trade, not insurance)	809	809
Cash and cash equivalents	2,218	2,218
Total Assets	117,950	117,212

4.1.2 Description of bases, methods and main assumption used for valuation for solvency purposes

Investments

The fair value of quoted financial assets is based on quoted market prices at the end of the reporting period. If the market for a quoted financial asset is not active or the financial asset is unlisted, the Company tries to establish other fair value by using valuation techniques. These include the use of recent arm's length transactions, reference to other instruments that are substantially the same and discounted cash flow analysis. However, there are cases where some short-term bonds are valued at cost due to lack of active markets.

Reinsurance Assets

The benefits to which the Company is entitled under its reinsurance contracts held are recognised as reinsurers' share of technical provisions or receivables from reinsurers (unless netted off against amounts payable to reinsurers). These assets consist of short-term balances due from reinsurers (classified within receivables), as well as receivables (classified as reinsurers' share of technical provisions) that are dependent on the expected claims and benefits arising under the related reinsured insurance contracts.

Properties

Investment properties are carried at fair value, representing open market value determined annually by external valuers. Fair value is based on active market prices, adjusted, if necessary, for any difference in the nature, location, or condition of the specific asset. If this information is not available, the Company uses alternative valuation methods such as recent prices on less active markets or discounted cash flow projections. The fair value of investment properties reflects, among other things, rental income from current leases and assumptions about rental income from future leases in the light of current market conditions.

4.1.3 IFRS17 vs Solvency II

On the assets side, overall differences are negligible, with the exception of reinsurance assets which are assessed under a slightly different methodology.

4.2 Technical Provisions

4.2.1 Value of Technical Provisions

4.2.1.1 Non-Life Technical Provisions

The Technical provisions are defined as the probability-weighted average of future cashflows, discounted to consider the time value of money. Technical provisions are grouped into the following key components:

- Claims Provisions: Best Estimate of provisions relating to outstanding claims
- Premium Provisions: Best Estimate of provisions that relate to the unearned exposure
- Risk Margin: Additional provision to bring the best estimate to the level required to transfer the insurance obligations to a third party

The below figures are shown both gross of reinsurance (RI) and also the share of the reinsurer.

€'000	Claims Provision		Premium Provision		Risk Margin
Line Of Business	Gross BE	RI Recoverable	Gross BE	RI Recoverable	
Motor vehicle liability	12,908	2,618	2,631	-287	685
Fire and other damage	415	356	280	70	14
General liability	468	124	128	33	23
Medical expenses	1,280	411	1,213	247	77
Workers' compensation	608	20	155	-16	32
Marine, aviation and transport	5	4	12	4	0
Motor, other classes	26	29	0	0	0
Total	15,709	3,561	4,419	51	831

4.2.1.2 Life and Unit-Linked Technical Provisions

The value of the Company's technical provisions is equal to the sum of the best estimate and the risk margin, which are calculated separately. The table below shows the value of technical provisions as at, 31 December 2024 both gross and net of reinsurance recoverables by line of business.

€'000	GROSS BEST ESTIMATE	REINSURANCE RECOVERABLE	RISK MARGIN
LINE OF BUSINESS			
Unit-linked insurance	67,423	-1,598	4,342
Other life insurance	-5,316	282	2,461
Total	62,107	-1,315	6,803

4.2.2 Description of the bases, methods and main assumptions used

4.2.2.1 Non-Life Insurance

Claims provision

The provision for claims outstanding relates to claim events that have already occurred, regardless of whether the claims arising from those events have been reported or not. Thus, the components of the Claims Provision are the outstanding case estimates, the Incurred But Not Reported (IBNR), the Incurred But Not Enough Reported (IBNER) and the Unallocated Loss Adjustment Expenses (ULAE). Under Solvency II, the reserves are discounted to allow for the time value of money using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

The payment pattern of the reserves, for each line of business (LoB), has been derived using the historical payment pattern, as observed in the Paid Claims triangles.

The expense ratio for claims handling was estimated at 4.1% of claims for Greece and Cyprus., respectively.

Premium provision

The calculation of the best estimate of the premium provision relates to all future cashflows arising from future events, over the remaining duration of unexpired policies. Such cashflows mostly relate to future claims, administration expenses and reinsurance cost.

For Cyprus, expense ratio was set at 5% and loss ratios between 5-67% depending on the product in question.

For Greece expense ratio was set high at 145% owing large fixed expenses in relation to a relatively small in force health portfolio (closed to new business). Loss ratio for that product line was set at 122% owing to low premium rates in relation to expected claims.

4.2.2.2 Unit-Linked Insurance

For the Unit-Linked Business the best estimate liability (BEL) set up has been derived from the value of the units allocated to the policies that were in force on the valuation date and the present value of the expected future cashflows related to these policies. The cash flow projections are performed on a best estimate basis (i.e., without any prudence margins) and discounting is performed using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

4.2.2.3 Other Life Insurance

The BEL for Other Life Insurance is calculated as the expected present value of all future cashflows arising in relation to other life insurance policies (premiums, expenses, claims etc.). The cash flow projections are performed on a best estimate basis (i.e., without any prudence margins) and discounting is performed using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

4.2.2.4 Risk Margin

The Risk Margin is designed to ensure that the value of technical provisions is equivalent to the amount that a third undertaking would be expected to require in order to take over and meet the Company's insurance obligations. The risk margin is calculated by determining the cost of providing an amount of eligible own funds equal to the SCR necessary to support the Company's reinsurance obligations over their lifetime thereof. This rate, called the Cost-of-Capital, is prescribed at 6%, as published by EIOPA.

4.2.2.5 Reinsurance Recoverables

Reinsurance Recoverables represent the difference between Gross and Net provisions.

- For the Claim Provision, the reinsurance recoverables were determined as the reinsurers' share on the current outstanding case by case reserves.
- For the Premium Provision, we have allowed for the cost of reinsurance and assumed zero reinsurance recoverables for classes with non-proportional reinsurance.
- For the Other Life BEL, all cashflows related to the current reinsurance treaties have been projected over the lifetime of the insurance policies. Their net present value represents the reinsurance recoverables.

Reduction of the reinsurance recoverables to allow for expected losses due to the default of counterparty has been also applied.

4.2.2.6 Discounting

The euro risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA, has been used for discounting. As expected, the impact of discounting for non-life and non SLT health was small due to the short-term nature of the business and the prevailing low interest rates.

4.2.3 Description of the level of uncertainty associated with the value of technical provisions

Uncertainty relates primarily to how future actual experience will differ from the best estimate assumptions used to calculate the technical provisions. Additional comfort on the appropriateness of the Technical provisions is provided through the use of independent external advisors who perform reviews of the results via a parallel valuation.

4.2.4 Quantitative and qualitative explanation of any material differences between the bases, methods and main assumptions used for the valuation for solvency purposes and for IFRS.

The following table shows how the value of the IFRS Technical Provisions (Reserves) change under the valuation for solvency purposes on a net of reinsurance basis.

NET TECHNICAL Provisions (€'000s)		
Line of Business	Solvency II	IFRS
Non-life excl health	14,644	19,630
Health	2,703	1,423
Life excl UL	-3,138	119
Life other	73,363	76,093

The main valuation principles of Solvency II leading to differences from reserves shown in the Financial Statements are:

- Different methodologies and calibrations are used to estimate SII risk margin and IFRS17 risk adjustment respectively
- Different discount rates are being used to estimate best estimate liabilities
- The introduction of the Contractual Service Margin (CSM) for IFRS17 liabilities

4.2.5 *Statement on whether the volatility adjustment referred to in Article 77d of Directive 2009/138/EC is used*

The Company has not used the volatility adjustment referred to in Article 77d of Directive 2009/138/EC,

4.2.6 *Statement on whether the transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC is applied*

The Company has not used the transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC,

4.2.7 *Statement on whether the transitional deduction referred to in Article 308d of Directive 2009/138/EC is applied*

The Company has not used the transitional deduction referred to in Article 308d of Directive 2009/138/EC.

4.3 Valuation of other liabilities

4.3.1 Value of other liabilities

Liabilities	Solvency II 2024	IFRS Valuation 2024
Provisions other than technical provisions	0	0
Reinsurance payables	2,498	2,498
Payables (trade, not insurance)	2,456	2,456
Any other liabilities, not elsewhere shown	1,646	1,646
Debts owed to credit institutions		
Total Liabilities	6,600	6,600

4.3.2 Description of the bases, methods and main assumptions used for their valuation for solvency purposes

Insurance payables

This balance is calculated in accordance with the terms and conditions of the contract with the intermediary/policyholder – no adjustments or judgements are made for valuation purposes. There is a high degree of certainty over the economic outflow due to the relatively short timeframe between the commission liabilities arising and the intermediary receiving payment from the Company.

Reinsurance payables

As at, 31 December 2024, the balance owed to reinsurers was €2.5mIn. This balance is in respect of reinsurance agreements that were in force at the reporting date, aggregated based on their comparable nature, function, risk and materiality.

Payables (trade, not insurance)

Payables (trade, not insurance) relate to balances owed in respect of other services received by the Company; no estimation methods, adjustments for future value or valuation judgements are required for these balances.

Any other liabilities, not elsewhere shown

Any other liabilities not elsewhere shown relate to current tax liabilities of nearly €200k and right of use liabilities.

4.3.3 Quantitative and qualitative explanation of any material differences with the valuation bases, methods and main assumptions used for the valuation for solvency purposes and for IFRS

There are no differences on the liability side apart from the technical provisions which are explained in detail in section 4.2.

5 Capital Management

5.1 Own Funds

5.1.1 Objectives, policies, and processes employed for managing its own funds

The objective of capital management is to maintain sufficient own funds to cover the SCR and MCR with an appropriate buffer. These should be of sufficient quality to meet the eligibility requirements in Article 82 of the Delegated Regulation. The Company holds regular meetings of senior management and BoD, which are at least quarterly, in which the ratio of eligible own funds over SCR and MCR are reviewed. As part of own funds management, the Company prepares annual solvency projections and reviews the structure of own funds and future requirements. The business plan, which forms the base of the ORSA, contains a three-year projection of funding requirements and this helps focus actions for future funding.

5.1.2 Information on the structure, amount, and quality of own funds at the end of the reporting period and at the end of the previous reporting period

The following table shows the structure of own funds as at 31 December 2024 as well as at 31 December 2023, on a Solvency II basis.

OWN FUNDS € '000S	2024	2023
Ordinary share capital (gross of own shares)	21,951	21,951
Share premium account related to ordinary share capital	3,157	3,157
Reconciliation reserve	- 3,770	-7,276
Deferred Tax Assets		
Total Basic Own Funds	21,337	17,831

The current structure of own funds as shown above is composed only of capital classified as Tier 1 - Unrestricted.

5.1.3 Eligible amount of own funds to cover SCR (by tier)

The Company's own funds are all Tier 1 unrestricted and available to cover the SCR.

5.1.4 Eligible amount of own funds to cover MCR (by tier)

The Company's own funds are all Tier 1 unrestricted and available to cover the MCR.

5.1.5 IFRS Equity vs Own Funds

The following summary table shows the comparisons and movement in the IFRS and Solvency II valuation of assets, liabilities and own funds.

	Solvency II €'000s	IFRS €'000s	Difference €'000s
Total Assets	117,950	117,212	738
Total Liabilities	96,613	103,042	-6,429
Total Own Funds	21,337	14,170	7,167

The movement in the valuation of assets and liabilities arises from the differences in the valuation of IFRS and Solvency II standards, mainly the introduction of CSM and risk adjustment for IFRS17

5.1.6 Ancillary own funds

The Company had no ancillary own funds as at 31.12.2024.

5.1.7 Description of any item deducted from own funds

The Company had no items deducted from own funds as at 31.12.2024.

5.1.8 Brief description of any significant restriction affecting the availability and transferability of own funds within the undertaking

The Company had no significant restriction affecting the availability and transferability of own funds within the undertaking as at 31.12.2024.

5.2 Solvency Capital Requirement and Minimum Capital Requirement

5.2.1 Amounts of SCR and MCR

As at, 31 December 2024 the SCR of the Company was calculated at €15.2mln and the MCR at €8mln.

5.2.2 Amount of SCR split by risk modules

The following table shows the SCR split by risk modules:

SOLVENCY CAPITAL REQUIREMENT	€'000s
Market risk	3,062
Counterparty default risk	1,597
Life Underwriting risks	9,643
Health underwriting risk	1,757
Non-Life underwriting risk	5,356
Sum of risk components	21,414
<i>Diversification effects</i>	-7,597
Diversified risk	13,817
Intangible asset risk	0
Basic SCR	13,817
Operational risk	1,376
Adjustments	0
SCR	15,193

5.2.3 Simplifications

Simplifications have been used for the

- calculation of catastrophe risk for life insurance
- calculation of risk margin

5.2.4 Undertaking-specific parameters

The Company has not used undertaking-specific parameters for any of the parameters of the standard formula.

5.2.5 Information on the inputs used to calculate the MCR

The inputs used in the calculation of the MCR are presented in the table below:

€'000s

Notional non-life and life MCR calculation	Non-life activities	Life activities
	C0140	C0150
Notional linear MCR	2,756	797
Notional SCR excluding add-on (annual or latest calculation)	11,784	3,409
Notional MCR cap	5,303	1,534
Notional MCR floor	2,946	852
Notional Combined MCR	2,946	852
Absolute floor of the notional MCR	4,000	4,000
Notional MCR	4,000	4,000

The total MCR for both activities (Life + Non-Life) is equal to €8mln.

5.2.6 Any material changes to the SCR and to the MCR over the reporting period, and the reasons for any such change

As shown below, only life underwriting risk has changed significantly

€'000s

	2024	2023	Δ
Market risk	3,062	2,987	75
Counterparty default risk	1,597	1,551	45
Life Underwriting risks	9,643	8,078	1,566
Health underwriting risk	1,757	1,789	-32
Non-Life underwriting risk	5,356	4,842	514
Sum of risk components	21,414	19,247	2,168
<i>Diversification effects</i>	-7,597	-7,004	-594
Diversified risk	13,817	12,243	1,574
Intangible asset risk	0	0	0
Basic SCR	13,817	12,243	1,574
Operational risk	1,376	1,340	36
Adjustments	0	0	0
SCR	15,193	13,583	1,610

The change in SCR is mainly due to life reserve releases which led to a higher life insurance capital requirement.

5.3 Non-compliance with the MCR and non-compliance with the SCR

5.3.1 *Non-compliance with the MCR*

The Company has always been compliant with the MCR.

5.3.2 *Non-compliance with SCR*

The company's SCR was above 115% throughout 2024 and reached **140%** by the end of the year. As per the business plan, coverage ratio is expected to improve further in 2025.
